(in minutes)**

Malcan Workflow for SharePoint®

Enables building complex workflows for SharePoint
in an easy and efficient way.
Both: system actions and human interactions using
your web browser only.

Dedicated to Power Users and Solution Provider –
we believe everybody want similar solutions, but
not the same.
That is why MWS represents the core component
for easy customizations. You don't need
administration rights, IT setup is done once only.

In cooperation with Partner Service Providers

Malcan Workflow for SharePoint® (MWS)

- What is "Malcan Workflow for SharePoint"?
 - MWS is a product that enables building workflows for SharePoint in an easy and very efficient way (in minutes). You can build really complex workflows consisting of human interaction and automatic actions using your web browser only. Starting with v.4.0 the same product enables custom editing forms and fields visibility control!
- Who can take advantage of MWS?
 - MWS was designed to be used by power users and solution providers. Once installed on SharePoint® platform you need to have site owner rights only to be able to design and run business processes on your site.
- Is MWS free or payed?
 - MWS is a payed product. Based on that - Malcan is releasing free solutions, fully functional examples you may take, run and customize. We believe everybody want the same "Vacation Module", "Project Management Module" but everybody want it a bit different... Other fields, other workflow steps, other calculations. Any number of solutions can be run using one license of MWS.

Major benefits of MWS?

- Easy process configuration & modifications (online), SHAREPOINT WORKFLOWS WITHOUT PROGRAMMING.
- For more complex scenarios you have **built in support for scripting** - you can control any data in your Sharepoint site including modifications, going through lists with **lookups, any calculations**.
- We know that **WORKFLOW ALONE IS NOT ENOUGH**. You have options to build custom editing forms in minutes. **You decide who, when and what data are entered**. Including any scope and data validations (built in the SharePoint platform, also own once).

The screenshot shows a SharePoint workflow task form. At the top, there are two tabs: 'Manage' and 'Actions'. The 'Manage' tab contains 'Edit Item', 'Version History', 'Manage Permissions', and 'Delete Item'. The 'Actions' tab contains 'Alert Me'. Below the tabs, the status is 'REQUEST'. There are two main actions: 'APPROVE' (As a Manager you are requested to approve this task) and 'DELEGATE' (Or you may delegate it to any given person). The 'DELEGATE' action is selected. The 'Next Approver' field is set to 'John Smith'. The 'Priority' is set to 'HIGH'. The 'Comment' field contains 'Take it from me please:'. There are three orange callout boxes: '1. Choose one action' pointing to the 'DELEGATE' button, '2. Enter action details (any data scope and validation)' pointing to the 'Priority' and 'Comment' fields, and '3. Confirm' pointing to the 'DELEGATE' button. At the bottom, there is a 'DECLINE' option and a 'Close' button.

Version: 3.0	Created at 10/4/2010 1:19 AM by Artur Malinowski
--------------	--

Other benefits?

- All in your browser and without additional programming tools. Basically safe subset of SharePoint object model is available for you. All important list events available for you e.g. you can easily react to adding, updating or deleting list/document item.
- Support for Active Directory so you can e.g. **easily get manager** for your approval.
- All **human tasks** are accessible on your SharePoint page e.g. on your vacation's list - you don't need to check tasks on one list to accept your vacation on another list.
- Calculations enabled - you may set your new values based on mathematical functions e.g. now you can easily group by calculated fields.
- Parameterization and e-mail notifications enabled. Support for CAML, **dynamic SharePoint permissions management**. Workflow cycles also available.
- Very **simple deployment** and maintenance. System requirements are MOSS 2007/2010 or free Windows SharePoint Services 3.0 / SharePoint Foundation 2010.
